ENVIRONMENTAL SYSTEMS PROGRAM

The Environmental Systems program at UCSD is a comprehensive center for teaching and research, designed to prepare students for a variety of environmental careers. The program has a strong focus on the natural sciences yet provides the breadth to cover the social and policy dimensions of interdisciplinary environmental issues facing our society.

INTERNSHIP PROGRAM

Internships are a valuable link between the academic world and industry. The intent of the Environmental Systems Internship Program is to place students in off-campus internships where they can gain valuable working experience while bringing useful skills and perspectives to the hosting organization.

Internship hosts typically find that Environmental Systems students are well trained, highly motivated, and especially eager to get hands-on practical experience.

Please let us know if you can place our students within your organization at:

Benefits to Hosting an Environmental Systems Internship

Services of highly motivated students eager to improve upon their skills.

An expanded workforce for special projects or short-term assignments.

Access to current academic research in your field.

Utilize skills and new perspectives for ongoing projects.

A chance to observe and train potential employees.

An opportunity to help train the workforce of the future.

HOW TO HOST AN INTERNSHIP

- Visit the Environmental Systems website or contact below.
- Describe your internship and identify the qualifications you require.
- Environmental Systems students will contact you with application materials and resumes.
- Interview qualified applicants and make hiring decisions.

In you have any questions, or interested in the internship program, please contact us.
